

AMENDMENTS TO THE SPECIFICATION:

Please amend the specification by replacing the paragraph extending from line 15 to line 22 of page 6, with the following amended paragraph:

For using the device, the device is assembled ~~assemble~~ as shown in Fig. 2 and Fig. 3, placing membrane 8 between the frame-means 7 and 9 ~~7 & 8~~. The reservoirs are positioned in the reservoir-rack and liquid samples are introduced into the reservoir. Loading samples into the reservoir may be performed by placing reservoir-rack on a separate platform, after loading the samples, the reservoir-rack containing reservoir and samples may be assembled with the main device, Fig.3. As the device is assembled ~~assemble~~, the capillary opening of the reservoirs rest and contact the membrane below. The top plate 11 may also be positioned ~~position~~ on top of the reservoir-rack to firmly secured the reservoir on top of the membrane and also cover the sample and the reservoir-rack.
